

ERIK KONNER

Software Developer

☎ (310) 701-7852 @ erikkonner@gmail.com 🔗 <https://github.com/ehk9000> 📍 Denver, CO

SUMMARY

I am a former finance and customer service associate turned software developer. With my customer service and office administration background in the finance industry, coupled with my technical training, I thrive at solving complex concepts and designing crisp, intuitive user experiences with comprehensive teams. As a quick learner, creative problem solver and enthusiastic collaborator, I have found my passion for coding.

PROJECTS

CoderDojo Colorado

CoderDojo is a global volunteer-led charity providing free programming workshops for elementary school students. This app provides a way for the independently run Dojo locations in Colorado to keep track of their student's attendance and for the leaders of the Dojos to create and edit events for their classes.

Built using:

Apollo GraphQL || React || Redux || Ruby || Rails || Travis CI || Jest & Enzyme || Heroku

🔗 <https://github.com/ehk9000/Coder-Dojo-Colorado>

Trapper-Keeper

A three-person project that replicates the note taking service Google Keep. It allows users to create notes that are saved to our backend server made with Node.js. Users can make unlimited list items per note, mark them as completed, as well as change the color of the note itself. The goal of the project was to create our first Node and Express server, in addition to making a complex and dynamic form.

Built using:

React || Redux || Thunks || Node.js || Express || Jest & Enzyme

🔗 <https://github.com/ehk9000/Trapper-Keeper/>

Board, Not Bored

A four-person project that details various board games, their difficulty, and number of players. It also displays bars in Denver that offer board games. It is my first project using React. The goal of the project was component structure and React syntax.

Built using:

React || Javascript || Fetch calls from an API || Jest & Enzyme
